KMW company portrait

360° competence

KMW develops and produces individual and intelligent refrigerators and freezers for all sales forms and business sizes in the food retail trade. **Our greatest strength is our know-how in terms of design, technology, energy efficiency, and customer-oriented service.**

For more than 35 years, KMW has stood for competence in refrigerator and freezer production. Our trained factory employees in Limburg create tailor-made refrigeration solutions for any needs our customers may have. We are also experts in the professional reconditioning and energy optimization of used refrigeration units and questions concerning refrigeration and multicompressor refrigeration system. We design energy- and cost-effective integrated concepts for our customers, from butcher shops and gas stations to premium shops all the way to supermarkets and discount stores. Very much in keeping with our high service standards, we are personally available to our clients 24-hours a day, 365 days a year.

Our 360° competence claim thus applies at any time.

We care a great deal about the responsible use of resources, both in terms of our products and during production processes in our factory.

For this reason we invest in our future: in our new, modern test labs we continually develop and optimize our products, in particular in terms of energy efficiency. We are committed to select climate protection projects for the protection of our environment and to balance our CO2 foot print.

A good education is the foundation for a successful future. KMW offers young people the opportunity to receive well-founded professional training in various professional fields. Since 2016 we have been partners of the Technical University Mittelhessen and train students in double majors in various fields.

KMW puts fairness first when interacting with our customers and partners and in our everyday interaction in the factory. We feel that honest and trusting cooperation is the basis for long-term success.

KMW stands for ...

- ✓ sustainable action
- ✓ maximum flexibility thanks to on-site production
- ✓ short delivery times
- ✓ customized detail solutions
- ✓ good economy and energy efficiency
- ✓ 24 hr service

... and of course maximum quality, reliability, and durability.

KMW refrigerators and freezers

The right frame for your products

As sole manufacturer offering a complete range of industrial refrigeration and freezer units produced in Germany, we recognize our responsibility to both our clients and the location of our company.

Our focus lies on easily adaptable modular elements which are tailor-made to meet the particular demands of the food industry and the space available in supermarkets. Our refrigerators and freezers are completely compatible with each other. Since we are a medium-sized company with short decision-making paths, modern machinery and highly skilled and experienced staff, we are able to react quickly and flexibly to meet individual customer demands.

Upon request, we offer our customers the complete program for refrigerating and freezing food from one source: **from individual planning and consulting via the production of suitable units and necessary refrigeration systems all the way to regular maintenance and 24-hour service.**

We live sustainability!

Since the foundation of our company, high energy efficiency has been at the heart of the development of our refrigeration systems, refrigerators, and freezers in order to counteract ever-increasing energy costs.

As a medium-sized company we are aware of our responsibilities to future generations. For this reason we continuously develop our units. Whether freezers, multideck cabinets, counters, or plug-in versions: at KMW you can rely on high energy efficiency. This protects the environment and the climate and saves our customers cash.

Thanks to our many years of experience in refrigerating food we can also upgrade older models – independent of manufacturer – to save you up to 30% in energy. The extent of the optimization is variable and can be customized as desired. Here, too, we guarantee that your orders are implemented quickly and easily.

Our customers have been relying on this for more than 35 years.

The **KMW** refrigerator and freezer program

We offer you high-quality refrigerators and freezers for the perfect presentation of your food items. For this we use variable modular elements, which gives us the right refrigeration unit for every store. We produce our units exclusively in Germany and all our units are designed to be energy-efficient. We offer a wide selection of multideck cabinets, refrigerated counters, freezers, and plug-in refrigeration units. Of course, we can also provide and install refrigeration systems tailored to your needs. You can find detailed information about different versions as well as about innovative solutions like our cold plug in our product brochures.

Multideck cabinets

KMW multideck cabinets are flexible and offer the best possible refrigeration for your meat products and cold cuts, dairy products, and fruit and vegetable selection. We also offer space-saving multideck cabinets for small stores perfectly present your goods in a customer-friendly way. Our multideck cabinets are also available as plug-in versions which offer the greatest degree of flexibility. KMW multideck cabinets can be supplied via a central refrigeration system or as a hybrid version equipped with decentralized refrigeration module.

Counters

Counters are the perfect refrigeration units to display fresh products in butcher shops, health food shops, and supermarkets. Whether as service or self-service version: refrigerated counters by KMW really bring out your selection of cheese, cold cuts, meat, or fish. Our classic and transparent design put the focus on your products – of course with optimal refrigeration and energy efficiency. Our counters are also available as plug-in versions.

Freezers

Clearly visible and easy to reach products, a constantly guaranteed refrigeration, and low energy consumption – KMW freezers are well conceived and provide the perfect storage space for frozen products to both small gas stations and large supermarkets. KMW freezers with their modern design are available as islands, cabinets, or a combination of both. This way, your products stay frozen even if they are selling like hotcakes.

Plug-in refrigeration

KMW plug-in refrigeration units are the perfect solution for those who want to position their fresh products flexibly in the store. The units can be set up anywhere in the store. Whether placed in a central location or on the wall as multideck cabinets – our plug-in refrigeration units give you the freedom you need.

Cold plug

KMW cold plugs make it easy to connect refrigeration units to the circuit of a refrigeration system using a removable connection. A coupling for the input and a coupling for the output of a refrigeration circuit, which each have a coupling part and an anti-coupling part, ensure that the system functions without any coolant seepage. When uncoupled, both ends of the circuit are guaranteed to be completely sealed. Therefore, all refrigeration units of a store or supermarket can be placed flexibly on the floor and still be connected to an existing refrigeration circuit.

Refrigeration systems

KMW designs and implements a climatized refrigeration system which bundles the control of all climate-related functions in the market centrally: air-conditioning and commercial refrigeration. When installing the system, food retailers profit from the high flexibility of the refrigeration unit manufacturer since the already existing heating system is integrated into the new overall cooling system. KMW helps lower costs: KMW refrigeration systems include a heat recovery system with which food retailers can reduce heating costs to a fraction.
